PHARMACOVIGILANCE SYSTEM MASTER FILE (PSMF)

Main Body Summary | Prepared from the supplied Workora source spreadsheets

Document status: Internship draft for review — not a verified regulatory PSMF or evidence of actual company operations.

1. Purpose and scope

This summary organizes the available source information into a PSMF-style overview. The supplied files cover a safety-system inventory and an SOP register. They do not provide a complete organization chart, named QPPV/contact details, full safety database architecture, training records, audit reports, or a complete audit trail. Those items are identified as requiring confirmation rather than being invented.

2. Pharmacovigilance organization and oversight

The supplied registers assign selected responsibilities to roles including the Qualified Person for Pharmacovigilance (QPPV), Safety Operations, Quality, IT, and Quality Assurance. A final controlled PSMF should include the approved organization chart, reporting lines, delegation/coverage arrangements, QPPV contact and deputy arrangements where applicable, and documented responsibilities for case processing, medical review, signal management, aggregate reporting, vendor oversight, and compliance monitoring.

Role shown in source	Responsibilities evidenced by register
QPPV	Case Intake; Medical Review; Aggregate Reports; Vendor Oversight; Audit and CAPA SOP ownership
Safety Operations	Signal Management; Literature Monitoring SOP ownership
Quality Assurance	Business Continuity SOP ownership
IT	Safety database and training-record system ownership
Quality	Document management and signal analytics system ownership

3. Safety systems and validation status

The inventory lists 4 systems. 1 is marked “Validated” and 3 are marked “Remediation open.” All four entries list weekly backups. Backup completion evidence and the appropriateness of each frequency must be confirmed against approved procedures.

System ID	Purpose	Owner	Validation status	Backup	Last access review
PV-SYS-01	Safety database	IT	Validated	Weekly	2026-05-20 00:00:00
PV-SYS-02	Document management	Quality	Remediation open	Weekly	2026-02-28 00:00:00
PV-SYS-03	Training records	IT	Remediation open	Weekly	2026-06-27 00:00:00
PV-SYS-04	Signal analytics	Quality	Remediation open	Weekly	2026-05-05 00:00:00

Priority follow-up: PV-SYS-02 (Document management), PV-SYS-03 (Training records), and PV-SYS-04 (Signal analytics) are marked “Remediation open.” Record the issue, impact/risk assessment, accountable owner, due date, interim controls, remediation evidence, and formal closure approval. Review the access-review dates and retain evidence of periodic access recertification.

4. SOP and training register

The SOP register contains 8 entries. Average training completion across the listed SOPs is 94.0%. 4 SOP(s) show completion below 95%; this is a descriptive threshold for review, not a regulatory acceptance criterion.

SOP ID	Title	Owner role	Version	Effective date	Training %
PV-SOP-001	Case Intake	QPPV	4.2	25 Feb 2025	95%
PV-SOP-002	Medical Review	QPPV	4.3	01 Apr 2025	87%
PV-SOP-003	Signal Management	Safety Operations	3.3	21 Apr 2025	93%
PV-SOP-004	Aggregate Reports	QPPV	4.5	08 Feb 2025	97%
PV-SOP-005	Vendor Oversight	QPPV	2.2	25 Mar 2025	98%
PV-SOP-006	Business Continuity	Quality Assurance	3.0	04 Jan 2026	92%
PV-SOP-007	Audit and CAPA	QPPV	3.5	26 May 2025	96%
PV-SOP-008	Literature Monitoring	Safety Operations	1.1	06 Jul 2026	94%

Training follow-up: Review outstanding training and effectiveness evidence for: PV-SOP-002 Medical Review (87%); PV-SOP-003 Signal Management (93%); PV-SOP-006 Business Continuity (92%); PV-SOP-008 Literature Monitoring (94%). Confirm the applicable training deadlines and required completion level in the organization’s approved procedures.

5. Safety data flow and signal management

The inventory identifies a safety database (PV-SYS-01) and a signal analytics system (PV-SYS-04), while the SOP register identifies Case Intake, Medical Review, Signal Management, Aggregate Reports, and Literature Monitoring procedures. These sources support a high-level workflow description, but do not establish system interfaces or actual technical architecture.

Workflow to document and verify: receipt of safety information → validity/triage and case intake → data entry and coding → medical review and causality assessment as applicable → regulatory reporting and follow-up → signal detection/evaluation and escalation → risk minimization and aggregate reporting → quality review, reconciliation, and archival. Add the approved system names, interfaces, data ownership, access controls, validation evidence, business continuity arrangements, and reconciliation controls before treating this as the organization’s actual workflow.

6. Quality management, audits, and CAPA

The SOP register includes Audit and CAPA (PV-SOP-007) and Business Continuity (PV-SOP-006). However, no audit history, findings log, CAPA tracker, inspection history, deviation records, or closure evidence was included in the supplied files. Insert a controlled summary of completed and planned audits/inspections, significant findings, root-cause analysis, corrective/preventive actions, owners, due dates, effectiveness checks, and closure status from approved records.

7. Key gaps to close before final approval

• Add approved company/legal entity details, products/markets in scope, document owner, version, approval date, and controlled-document metadata.

• Attach the organization chart and verified QPPV details, responsibilities, deputy/coverage arrangements, and relevant vendor/partner interfaces.

• Resolve or formally track the three systems with open remediation; attach validation and change-control evidence.

• Verify backup/restore tests, access reviews, system interfaces, data retention, disaster recovery, and business continuity evidence.

• Confirm SOP training completion and attach evidence from the training system; investigate lower completion values.

• Add actual audit/inspection history, deviations, CAPA status, reconciliation controls, and quality metrics from controlled records.

• Have the responsible QPPV/quality representative review and approve the final controlled version.

8. Source files used

• safety_system_inventory.xlsx — system ID, purpose, owner, validation status, backup frequency, and last access review date.
• sop_register.xlsx — SOP ID/title, owner role, version, effective date, and training completion percentage.

Important: This document is an educational/internship draft derived only from the two supplied spreadsheets. It must not be represented as an approved PSMF, a complete regulatory dossier, or proof that missing controls and activities exist. Replace placeholders/gap statements with verified records before any real-world regulatory use.
